

Travel Family

The next generation of electric outboards for kayaks, dinghies and daysailers up to 2 tons.

Torqeedo is taking its iconic Travel series to the next level. Since 2006, the Travel motor has stood for high efficiency, innovative technology, and exceptional ease of use, with global sales of over 100,000 motors. Today, the product family is more modular, flexible and application-oriented than ever before – from the new entry-level model to the powerful Travel XP flagship for more demanding use cases.

At the center of the latest expansion is the new Travel Smart Package. The new 700 W Travel XS is designed specifically for smaller dinghies and, in the Smart Package, is paired with the new Travel Battery XS with 648Wh. Torqeedo positions the package as a lightweight and intuitive entry into the next generation of electric mobility on the water.

A defining feature of the Travel Family is its modular, mix-and-match design. Users can select the motor that best fits their boat and application, then combine it with the battery option that best suits their needs in terms of range, weight and performance. This allows for highly flexible setups, such as pairing the compact Travel XS with the XP battery for maximum range. Packages such as Essential, Range, Adventure and Power help guide users toward the setup that best suits their intended use, whether for everyday boating, longer outings, kayak fishing or more demanding conditions.

Designed to make electric mobility on the water easier and more versatile for everyday use, the new Travel Family offers a range of features, including a click-and-play battery, a backlit full-color display, GPS-based real-time range and runtime data, Bluetooth and Wi-Fi connectivity, TorqView app integration and solar charging capability.

The foldable tiller makes the Travel Family even easier to handle, transport and stow and the practical three-stage rotation control enables users to swiftly switch between fixed steering, +/- 60-degree steering and fully rotatable 360-degree steering.

Torqeedo combines its long-standing expertise in electric propulsion with an obvious user-focused approach. The result is a product portfolio that covers a broad range of

recreational applications – all designed to deliver a quiet, emission-free and thoroughly unique usage on the water.
